ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Manufacturers' shipments in January, according to the preliminary estimate, were valued at \$2,804 million, a drop of 7.5 per cent from the revised estimate of \$3,031 million in December last, but a substantial increase of 15.5 per cent compared with the value in January 1965. January shipments, seasonally adjusted at \$3,097 million, were, however, 0.9 per cent higher than the preceding month. New orders received during January dropped 5.7 per cent from December to \$2,858 million which was 11.6 per cent above the value in January a year earlier. Unfilled orders at the end of January rose 1.7 per cent to \$3,210 million from \$3,156 million in December; the rise in January, however, was less than the expected seasonal increase as the seasonally adjusted backlogs for the month declined by 3.4 per cent from \$3,280 million to \$3,169 million. The end-of-January inventories owned showed fractionally higher levels than December both in the seasonally adjusted and the unadjusted estimates.

Shipments of durable goods manufacturers were valued at \$1,364 million in January, lower than the revised estimate of \$1,501 million on December by 9.1 per cent but significantly higher, by 23.3 per cent, than the \$1,106 million in January of last year. At the preliminary estimate of \$1,440 million, non-durable goods producers' January shipments also showed a decrease of 5.9 per cent from the month before and an increase of 9.0 per cent over the corresponding month a year earlier. Nearly all major industry groups shared the seasonal decline of shipments from December to January. Relatively marked decreases in the value of shipments were reported by the non-metallic minerals industries (-23.8 per cent), the furniture and fixtures industries (-23.5 per cent), and the electrical products industries (-20.1 per cent). Seasonal influences were less apparent than usual in January 1966 shipments values in the machinery industries, in sharp contrast with the movement last January when the decline from December was the highest recorded. Consequently the comparison of shipments this month with January last year shows a very large increase. January shipments in the machinery industries declined 5.5 per cent from the record high in December. All major industry groups registered higher values of shipments in January compared with the same month of the previous year, with relatively large increases recorded in the transportation equipment industries (30.9 per cent), the metal fabricating industries (29.0 per cent) and the rubber industries (26.0 per cent).

At the estimated value of \$3,210 million at the end of January, manufacturers' unfilled orders were 16.4 per cent above the level in January 1965; this higher level of unfilled orders was shared by both the durable and the non-durable goods manufacturers which reported increases of 16.0 per cent and 18.2 per cent respectively. It should be noted that the value of month-end unfilled orders had been consistently higher than monthly shipments by rates ranging from 1.4 per cent to 10.7 per cent from January of last year to January 1966, based on the seasonally adjusted figures. In the durable goods industries, new orders which declined 5.5 per cent in January were 15.6 per cent over the January value in 1965.

Manufacturers' inventories owned and inventories held at the end of January amounted to \$5,761 million and \$6,058 million, up 10.9 per cent and 9.7 per cent

respectively compared with the levels at the end of January last year. Seasonally adjusted inventories held at the end of January were only 0.1 per cent above the level in December; small increases in raw materials and finished products were partly offset by the decrease in goods in process inventory. Inventories owned in the durable goods industries in January rose 0.3 per cent from December to \$2,850 million which was 17.2 per cent above the level of January 1965. Non-durable goods manufacturers' stocks were down 0.2 per cent from December but up 5.3 per cent compared with the corresponding month a year ago. Comparatively large accumulation of inventories owned in January were recorded in the miscellaneous industries of 3.2 per cent, the wood industries and the non-metallic minerals industries of 2.0 per cent, while the foods and beverages industries reported the largest decrease of 2.3 per cent in January. All industry groups reported higher level of inventories owned in January this year than last year except the petroleum and coal products industries which showed a slight decrease.

Based on the seasonally unadjusted estimate in January, value of inventories owned was 2.05 times the value of shipments compared with 1.90 in December, and the ratio of finished products inventory to shipments was also up from 0.69 to 0.71.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFULFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Total value of shipments in Canadian manufacturing industries in February was up 2.3 per cent to a preliminary estimate of \$2,806 million from the revised estimate of \$2,743 million in January. New orders received in February totalled \$2,836 million, 1.3 per cent lower than the amount last month but larger than the February shipments; consequently, unfilled orders at the month's end were up by 0.9 per cent. Inventories owned at the end of February had also risen by 0.7 per cent from \$5,796 million to \$5,838 million. After adjusting for the seasonal pattern in February manufacturers' shipments, new orders and unfilled orders this month were all higher than in January by 1.5 per cent, 3.7 per cent and 0.9 per cent respectively, while inventories owned showed a slight drop of 0.2 per cent.

Shipments for the first two months of 1966 amounted to \$5,549 million, 13.5 per cent more than the value in the comparable period of 1965. The more than seasonal increase in shipments in February was shared equally by the durable and the non-durable goods industries. Relatively significant advances were shown in the clothing industries (24.3 per cent), the knitting mills (14.4 per cent), the furniture and fixtures industries (13.1 per cent) and the non-metallic mineral products industries (11.2 per cent).

February shipments in the tobacco industries showed a decline of 13.1 per cent from January which is in line with the pattern for February in the past two years. Moderate decreases in February shipments were recorded in the petroleum and coal products industries, the transportation equipment industries, the textile industries and the primary metal industries.

New orders for the durable goods industries in February dropped 2.9 per cent from the month before while the non-durable goods industries reported fractional increases. The small increase of the manufacturers' month-end backlog in February over January was attributable for the most part to the increase in the durable goods industries.

Manufacturers' inventories held reached \$6,108 million at the end of February, 0.8 per cent higher than last month and 8.8 per cent more than the level in the corresponding month a year ago. The accumulation of manufacturers' inventories held in February was reflected only in goods in process and finished products; raw materials stocks were off slightly. Durable goods producers contributed the larger part of the increase in the February inventory level.

Comparatively substantial increases in inventories held in February were reported by the transportation equipment industries, 4.1 per cent, and the wood industries, 3.5 per cent. Foods and beverages industries reflected the usual inventory drop in February with a decline of 1.7 per cent. Nearly all major industry groups' inventories held at the end of February were higher than they were a year ago, except in the tobacco, leather and petroleum industry groups. Values of inventories held in the metal fabricating industries and the machinery industries were 17.1 per cent and 22.2 per cent respectively higher than they were in the same month a year ago.

The value of manufacturers' total inventories owned was 2.08 times the value of shipments in February compared with 2.11 last month and 2.15 in February 1965. The ratio of finished products inventory to shipments remained unchanged from January at 0.72 in February but is much lower than the ratio of 0.79 in February last year.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Manufacturers' shipments, new orders and unfilled orders in March showed customary seasonal increases from February of 12.5 per cent, 13.3 per cent and 2.0 per cent respectively, but after adjustment for seasonal factors both shipments and new orders were 2.5 per cent lower than the previous month while unfilled orders were up by 1.1 per cent. Inventories owned by manufacturers at the end of March were higher by 0.6 per cent, or by 1.0 per cent seasonally adjusted, as compared with the level at the end of February.

The value of shipments in March was estimated at \$3,166 million, 8.0 per cent higher than that of March 1965. Total shipments for the first quarter of 1966 reached \$8,723 million, a rise of 11.5 per cent over the same period of last year. March shipments by durable goods producers were 14.8 per cent above the value in February, while non-durable goods manufacturers reported an increase of 10.3 per cent. All major industry groups indicated higher shipments in March, with relatively larger advances recorded in the tobacco industries (23.1 per cent) and the machinery industries (20.8 per cent). The electrical products industry group showed the smallest relative increase of shipments in the month, while the increase in shipments in the transportation equipment industry group, though substantial, was less than the increase from February to March 1965.

New orders received by the durable goods producers during March were 15.5 per cent higher than during February, and the increase in the level of manufacturers' unfilled orders at the end of March mainly resulted from the 2.4 per cent increase in unfilled orders in the durable goods industries.

At the estimate of \$6,185 million, manufacturers' inventories held at the end of March were 0.6 per cent above the level at the end of February and 9.3 per cent higher than at the end of March 1965. Most of the rise in March inventories after seasonal adjustment occurred in finished products. Inventories owned by durable goods manufacturers increased 0.4 per cent in March. Appreciable increases in inventories in the wood industries and in the electrical products industries were largely offset by a substantial drop in stocks owned by primary metal industries. Non-durable goods producers also reported higher stocks at the end of March; the \$23.6 million or 0.8 per cent build-up was accounted for chiefly by the tobacco industries.

Both the ratio of manufacturers' total inventories owned to shipments and the ratio of finished products inventory to shipments were at the usual seasonal low in March; they were estimated at 1.87 and 0.65 respectively compared with 2.09 and 0.72 in February.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Preliminary estimates of April shipments and new orders in the manufacturing industries dropped 7.1 per cent and 8.8 per cent respectively from the revised estimates for March. The backlog of unfilled orders at the end of April increased less than 1 per cent from the end-of-March level while manufacturers' inventories at the end of April indicated very little change. After adjustment for seasonal variation, manufacturers' shipments and new orders in April again were lower than March by 1.8 and 2.2 per cent; unfilled orders and inventories owned at the end of April, however, were up by 1.3 per cent and 0.2 per cent respectively.

Manufacturers' April shipments valued at the preliminary estimate of \$3,012 million, brought the total shipments in the January-April period to \$11,813 million, 11.1 per cent higher than in the corresponding period in the previous year with shipments of \$10,629 million. Shipments of durable goods producers were down 8.0 per cent in April while non-durable goods producers also reported a decline of 6.3 per cent from March.

All major industry groups reported lower shipments in April as compared with March with the exception of the electrical products industries and the chemical and chemical products industries in both of which shipments were 0.8 per cent above the values in March. Relatively significant decreases were recorded in the tobacco industries of 24.5 per cent, and in both the knitting mills and the clothing industries of 20.9 per cent. At the preliminary estimate of \$378 million, the transportation equipment industries reported the largest absolute decline in shipments from March, and at this level were only 1.8 per cent above the value in April, 1965. April shipments in the electrical products industries did not show the usual decline from the March level but remained at about the same level as last month, and were 22.0 per cent higher than April 1965.

New orders received by durable goods manufacturers during April were down 11.0 per cent to \$1,494 million from \$1,679 million in March, but were still above the value of shipments for the month. Unfilled orders in the durable goods manufacturing industries at the end of April rose from \$2,879 million in March to \$2,913 million which was 15.6 per cent higher than the April level a year earlier.

The small increase in the seasonally adjusted estimate of inventories held at the end of April was attributable to the increase in raw materials; a slight increase in the finished products inventory was offset by a small decrease in the goods in process inventory. Inventories owned by the non-durable goods producers at the end of April dropped slightly to below the level in March, while the durable goods manufacturers' end-of-April inventories owned showed a fractional increase. Inventories owned in the tobacco industries which reported the largest relative decrease of inventory were off by 2.9 per cent from the record high reached in March. Comparatively large increases were shown in the rubber industries and the miscellaneous industries. Compared with the comparable levels in the previous year, inventories owned by the transportation equipment industries and the machinery industries at the end of April remained at the highest among the major industry groups.

In April, the value of manufacturers' inventories owned was 1.97 times the value of shipments, compared with 1.83 in March. The ratio of finished products inventory to shipments in the manufacturing industries was 0.69, higher than the ratio of 0.64 in March.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Preliminary estimates of manufacturers' shipments and new orders in May were up 2.9 per cent and 2.3 per cent respectively from the revised April figures. These increases in May, however, were less than the usual seasonal rises as the seasonally adjusted estimates of May shipments and new orders were lower than the values in April by 1.6 per cent and 2.1 per cent respectively. Manufacturers' unfilled orders and inventories at the end of May again showed higher levels than at the end of last month, both seasonally adjusted and unadjusted.

The value of manufacturers' shipments in May was estimated at \$3,107 million, compared with the revised estimate of \$3,018 million in the previous month. Both durable and non-durable goods producers shared the less than seasonal increase in shipments in May. For the first five month period of this year, total manufacturing shipments amounted to \$14,925 million, a rise of 10.4 per cent over \$13,518 million in 1965. Significant advances in cumulative shipments to date over the values of last year were achieved by the machinery industries and the metal fabricating industries.

Non-metallic mineral products industries registered the highest relative increase in shipments from April to May; the 22.2 per cent gain was mainly the result of the industries' seasonal increase. Other more sizable increases in May shipments occurred in the food and beverage industries, the wood industries, the paper and allied products industries, and the metal fabricating industries. Relatively marked declines in shipments from April to May were shown in the clothing industries and the leather industries, again, reflecting the seasonal low shipments in the month. Compared with the corresponding month in 1965, shipments in May in the textile industries were down by 3.4 per cent, the most noticeable relative decline among the major industry groups.

New orders received by the durable goods producers during the month of May dropped to the preliminary estimate of \$1,511 million from the revised estimate of \$1,513 million in April. The backlog of unfilled orders in the durable goods industries at the end of May was only fractionally higher than at the end of April, but was 18.1 per cent above the level of May 1965.

Manufacturers' inventories owned at the end of May stood at \$5,976 million, 11.5 per cent higher than the level of May last year. The 0.4 per cent increase in total inventories held from \$6,247 million to \$6,269 million in May was attributable to the increased holdings of finished products and raw materials. Durable goods industries as a whole showed a 1.0 per cent increase in inventory owned at the end of May, while the non-durable goods industry group reported a slight fall of 0.3 per cent. Of all the manufacturing industry groups, the leather industries and the electrical products industries indicated the relatively larger increases in inventory owned in the month ended May. Transportation equipment industries and the machinery industries, as in the previous months, recorded the highest stocks increases in May as compared with the levels of May 1965.

The ratios of manufacturers' inventories owned to shipments and finished products inventory to shipments in May were down slightly to 1.92 and 0.68 from 1.97 and 0.69 respectively in April.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Value of shipments and new orders in the manufacturing industries in June again indicated less than seasonal rises from the revised values in May, by 2.4 per cent and 0.6 per cent respectively, according to the preliminary estimates for June. Manufacturers' backlog of unfilled orders and inventories held at the end of June dropped almost half of one per cent from the levels of the preceding month. After adjustments were made for seasonal variation, shipments, new orders, and unfilled orders in June were 0.2 per cent, 2.8 per cent and 0.5 per cent respectively lower than in the previous month, while inventories held edged up 0.3 per cent.

Preliminary estimate of June shipments amounted to \$3,227 million and brought total shipments in the January - June period to \$18,199 million, 10.0 per cent over the corresponding period of 1965. In comparison with the same period of last year, shipments this year in fourteen out of the nineteen published industry groups showed increases of 9.3 to 19.9 per cent, with the largest increases recorded in the machinery industries (19.9 per cent), the metal fabricating industries (16.3 per cent) and the rubber industries (16.0 per cent). The increase in the transportation equipment industries was estimated at 8.8 per cent, far below the comparable increase of 13.5 per cent in 1965, reflecting mainly the low level of the second quarter shipments in the motor vehicle industry. The only industry group to drop slightly behind the comparable value of shipments in 1965 was the textile industries which declined 1.0 per cent. Several major establishments in these industries were closed by strikes during the second quarter.

Within the durable goods industry group which showed a 3.1 per cent rise in shipments from May to June, relatively large and seasonal increases were reported by the wood industries, the non-metallic mineral products industries and the metal fabricating industries. June shipments in the non-durable goods industries were only 1.7 per cent higher than in May. More than half of this increase came from the large foods and beverages industry group; higher shipments in other industries were partly offset by decreases in the clothing industries and the petroleum and coal products industries.

New orders received by durable goods producers during June increased slightly to \$1,559 million from \$1,552 million in May. Durable goods producers' outstanding orders at the end of June at \$2,929 million, were 0.6 per cent lower than at the end of the previous month but 19.3 per cent higher than the comparable figure for a year earlier.

Manufacturers' inventories held at the end of June decreased fractionally to \$6,261 million from the revised estimate of \$6,286 million in May. The decrease in June stocks was reflected solely in goods in process and finished products while raw materials showed a small increase. Relatively large decreases in inventories owned were reported in the tobacco industries (4.3 per cent), the chemical and chemical products industries (2.4 per cent) and the transportation equipments industries (2.1 per cent).

In June, the ratios of total inventories owned to shipments and finished products to shipments were estimated at 1.85 and 0.65 respectively, the usual low ratios for the month.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

Shipments of Canadian manufacturers in July were estimated at \$2,870 million, a more than seasonal drop of 12.4 per cent from the revised estimate of \$3,276 million in June. New orders received during July also were down 12.9 per cent from the previous month, while outstanding orders increased marginally. Seasonally adjusted estimates of shipments, new orders and unfilled orders in July were lower by 1.2 per cent, 1.9 per cent and 0.02 per cent respectively than in June. Manufacturers' owned inventories at the end of July indicated little increase from the preceding month, but after allowances for seasonal variation, the estimate which stood at \$6,071 million rose nearly one per cent from \$6,021 million.

Cumulative shipments for the first seven months of 1966 amounted to \$21,118 million, 9.5 per cent above the value in the same period of last year. Durable goods producers' July shipments were 16.9 per cent lower than that in June, while non-durable goods producers also reported a decline of 8.0 per cent. All major manufacturing industry groups showed decreases in July shipments with the exception of the clothing industries which was on the beginning of a seasonal advance. In July, transportation equipment industries reported the most significant seasonal decrease in shipments (-37.2 per cent) attributed mainly to the declining July shipments in the motor vehicle and the parts industries. Other relatively substantial drops in shipments in July, mainly seasonal, were recorded in the textile (-20.9 per cent), the chemical and chemical products (-19.9 per cent), the leather (-17.8 per cent), the rubber (-17.4 per cent) and the electrical products (-16.8 per cent) industry groups.

About two-thirds of the decrease in manufacturers' new orders from \$3,301 million in June to \$2,876 million in July occurred in the durable goods industries which dropped 17.2 per cent. Durable goods producers' backlog of unfilled orders at the end of July was estimated at \$2,964 million, 0.2 per cent higher than the preceding month and 20.4 per cent above the level in July of 1965.

At the end of July, inventories held by manufacturers reached \$6,293 million, compared with \$6,286 million in June; a 1.2 per cent increase in raw materials was largely offset by the 1.4 per cent decrease in goods in process inventory. However, the seasonally adjusted estimate of July inventories held, which rose 0.9 per cent was centered mainly in finished products and goods in process. Stocks held by durable goods manufacturers at the end of July were down 0.6 per cent from the previous month end while non-durable goods producers reported a higher stocks level of 1.0 per cent with almost all of it concentrated in finished products. In July, more noticeable increases in owned inventories of the paper and allied products, the primary metal, the food and beverage and the petroleum and coal products industry groups were substantially offset by the decreases in the inventories of the transportation equipment industries and the tobacco industries.

The ratios of manufacturers' inventories owned to shipments, and finished products to shipments, rose from 1.83 and 0.65 respectively in June to 2.09 and 0.74 in July.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

TREND SUMMARY

The preliminary estimates of \$2,908 million for manufacturers' shipments and \$2,981 million for new orders in August, showed increases of 3.1 per cent and 7.4 per cent respectively from the low levels of \$2,820 million and \$2,776 million in July. The backlog of unfilled orders reached \$3,557 million at the end of August, 2.1 per cent higher than the revised estimate of the previous month. Seasonally adjusted, however, August shipments dropped 1.5 per cent while new orders and unfilled orders were up by 3.8 and 3.1 per cent respectively. Manufacturers' owned inventories at the end of August were higher by 1.3 per cent and by 0.7 per cent after seasonal adjustment, than the level of the preceding month.

Total manufacturing shipments for the January - August period amounted to \$23,976 million, 8.9 per cent ahead of the value in the same period of last year. August shipments in the non-durable goods industries were 7.1 per cent higher than in July. Relatively substantial increases in shipments, entirely seasonal, were recorded in the leather industries (53.0 per cent), the clothing industries (34.9 per cent) and the knitting mills (19.6 per cent). Shipments of durable goods manufacturers, on the other hand, dropped again in August to \$1,271 million from \$1,291 million in July. This decline which follows the seasonal trend brought the shipments in the transportation equipment industries down by 27.5 per cent -- from \$251 million in July to \$182 million. This value was however 17.0 per cent above the level of August 1965.

Inventories held by manufacturers at the end of August rose 1.4 per cent to \$6,377 million from \$6,290 million in July with a larger increase occurring in the goods in process inventory than in raw materials stocks; stocks of finished products fell slightly. Durable goods producers showed a rise of 1.7 per cent in August inventory held; goods in process climbed 5.2 per cent while finished products dropped 3.2 per cent. The 1.1 per cent increase in non-durable goods producers' inventories was largely concentrated in finished products. Almost half of the inventory build-up in August was attributable to the seasonal rise of inventories in the transportation equipment industries which increased 6.0 per cent over the previous month, and 26.4 per cent above August of last year. A more than seasonal increase in August inventories was also reported by the food and beverage industries (4.0 per cent). Stocks held by the tobacco industries in August, continuing the seasonal drop which began in April, were 3.8 per cent lower than the level in July.

In August manufacturers' owned inventories were estimated at 2.09 times shipments compared with the revised estimate of 2.13 in the previous month. The ratio of finished products inventory to shipments also dropped from 0.74 in July to 0.72 in August.

New orders received by durable goods industries during August rose 8.8 per cent to the preliminary estimate of \$1,363 million from \$1,253 million in July. At the end of August, durable goods producers also reported higher outstanding orders at \$3,013 million. At this level they were equal to 2.4 months of sales.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

TREND SUMMARY

The preliminary estimate of manufacturers' shipments in September rose by 6.0 per cent to \$3,150 million from the revised estimate of \$2,971 million in August. At the preliminary September estimates of \$3,081 million and \$3,553 million, new orders and unfilled orders dropped 0.9 per cent and 1.9 per cent respectively from the revised figures of the previous month. After allowance was made for seasonal variation, September shipments were off slightly from August, new orders declined 5.3 per cent, while unfilled orders increased fractionally. Manufacturers' inventories owned at the end of September continued the gradual rise to a preliminary estimate of \$6,145 million, 0.7 per cent above the level at the end of August.

Total manufacturing shipments for the first nine months of 1966 reached \$27,188 million, showing a gain of 8.8 per cent over the comparable period of last year. Most of the advance in September shipments was attributable to an 11.7 per cent increase in the durable goods industries. Shipments in the non-durable goods industries, on the other hand, increased only 1.6 per cent from August to September. The largest increase in September shipments was shown in the transportation equipment industries which reported an advance of 49.9 per cent from the low shipments level in August; this change reflected mainly the beginning of a usual seasonal rise in shipments in the motor vehicle industry. September shipments in the rubber industries were also seasonally higher by 24.1 per cent than those of the preceding month. Other relatively substantial gains in shipments were reported in the electrical products industries (16.2 per cent) and the furniture and fixtures industries (14.8 per cent). Paper and allied products industries registered the greatest shipments decline in September.

Preliminary estimate of new orders received by durable goods manufacturers during September totalled \$1,391 million, a drop of 4.6 per cent from the revised estimate of \$1,459 million in August. This decline in new orders was partly offset by the 2.3 per cent increase reported by the non-durable goods industries. Unfilled orders of durable goods producers at the end of September amounting to \$3,027 million were 1.8 per cent below the level of the previous month; this decrease was principally responsible for the lower level of outstanding orders in the manufacturing industries at the end of September.

Total inventories held by manufacturers at the end of September edged up 0.6 per cent to a preliminary estimate of \$6,445 million with a larger increase occurring in goods in process inventory. This moderate accumulation in manufacturers' September inventories showed up mainly in the durable goods industries, and particularly in goods in process. A small 0.3 per cent rise in stocks reported by the non-durable goods industries in September, on the other hand, was almost entirely in finished products. In September, the most significant change in inventories was again shown in the transportation equipment industries reflecting chiefly the seasonally high level of goods in process inventory in the motor vehicle industry. Other noticeable increases in owned inventories reported by the food and beverage industries (2.7 per cent) and the primary metal industries (1.6 per cent) outweighed decreases ranging from 0.1 to 2.7 per cent shown in many other major industry groups.

Manufacturers' owned inventories, valued at 1.95 times shipments in September, dropped again from 2.06 in the previous month. Finished products inventory in September was 67 per cent of the value of shipments, compared with 71 per cent in August.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

The preliminary estimate of manufacturers' shipments in October, valued at \$3,165 million, were off slightly from the revised September estimate of \$3,173 million. New orders received by manufacturers during October totalled \$3,145 million, 1.7 per cent above the value in September. Unfilled orders at the end of October dropped fractionally by 0.6 per cent from the level at the end of the previous month as the value of shipments slightly exceeded new orders for the month. After adjustment for seasonal factors, manufacturers' shipments, new orders and unfilled orders showed increases of 2.6 per cent, 3.7 per cent and 0.7 per cent respectively from the preceding month. Manufacturing stocks owned at the end of October edged up 0.7 per cent and 0.8 per cent after seasonal adjustment, from the end of September.

Total shipments for the first ten months of 1966 advanced 8.6 per cent to \$30,377 million from \$27,965 million for the comparable period in 1965, with a larger gain in the durable goods industries than in the non-durable goods industries. Among the major industry groups the highest relative increase in shipments to date in 1966 was registered by the machinery industries (17.6 per cent), followed by the increase in the electrical products industries (14.1 per cent).

In October, shipments of durable goods producers increased slightly from \$1,469 million to \$1,476 million, while non-durable goods producers reported a drop of 0.9 per cent from \$1,704 million to \$1,689 million. More noticeable decreases in October shipments, mostly seasonal, were recorded in the tobacco industries, the leather industries, the clothing industries, the metal fabricating industries and the non-metallic minerals industries. The large increase of shipments in the transportation equipments industries was, again, attributable mainly to a seasonal rise in the motor vehicle and parts industries.

At the preliminary estimate of \$1,466 million, durable goods manufacturers' new orders in October were 4.3 per cent higher than the revised figure of \$1,406 million in September. Outstanding orders of durable goods industries at the end of October declined slightly from \$3,020 million to \$3,010 million which was however, 15.3 per cent higher than at the end of October last year. The value of unfilled orders in October was 2.04 times shipments for the month.

Inventories held by manufacturers at the end of October were up 0.6 per cent to \$6,501 million, and 1.0 per cent to \$6,562 million seasonally adjusted, from the level at the end of the previous month. This accumulation of stocks in October occurred mainly in goods in process and finished products inventories. Stocks owned by durable goods producers at the end of October reached \$3,124 million, 0.7 per cent ahead of the previous month and 14.7 per cent above the level in October 1965; relatively significant increases were shown in the electrical products and the transportation equipment industry groups. Non-durable goods manufacturers also reported an increase of 0.7 per cent in owned inventories in October. A rather substantial stocks build-up in the food and beverage industries was partially offset by the large decreases in the tobacco industries and the petroleum and coal products industries.

Ratios of manufacturers' inventories owned to shipments and finished products to shipments in October were estimated at 1.95 and 0.68 respectively compared with 1.94 and 0.67 in the previous month and 1.86 and 0.65 in October 1965.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

TREND SUMMARY

Manufacturers' shipments, new orders and unfilled orders for November were estimated at \$3,229 million, \$3,256 million and \$3,533 million, showing increases of 0.8 per cent, 2.8 per cent and 0.8 per cent respectively over the revised estimates for October. After factors of seasonal variation were removed, the estimate of shipments was off 0.7 per cent and new orders dropped 0.1 per cent in comparison with the October estimates, while unfilled orders showed the same increase of 0.8 per cent as the unadjusted estimate. Inventories owned by manufacturers at the end of November moved up 0.6 per cent to \$6,256 million from \$6,219 million in October and were up 0.2 per cent on the basis of the seasonally adjusted estimates.

Total shipments for the first eleven months amounted to \$33,643 million, 8.4 per cent higher than for the comparable period in 1965 of \$31,049 million. The small increase in manufacturers' shipments in November occurred entirely in the durable goods manufacturing industries where shipments were 1.9 per cent higher than in October and 3.7 per cent higher than in November of last year. At the preliminary estimate of \$1,697 million, November shipments in the non-durable goods industries showed practically no change from October but were 5.6 per cent above the November value a year ago.

The most significant increase in November shipments appeared again in the transportation equipment industries. The 21.3 per cent advance in shipments from \$355 million in October to \$431 million in November was again attributable mainly to the seasonal increase in the motor vehicle and parts industries. Shipments in the tobacco industries were also seasonally higher in November by 20.0 per cent from the low level in the preceding month. More substantial declines were recorded in the wood industries (-10.4 per cent), the clothing industries (-10.0 per cent), the non-metallic minerals industries (-8.8 per cent), the electrical products industries (-7.0 per cent) and the metal fabricating industries (-5.0 per cent).

For the month of November, durable goods manufacturers reported an increase of 4.9 per cent in new orders from the estimate of \$1,484 million in October to \$1,557 million. The backlog of unfilled orders at the end of November reached \$3,025 million, 0.8 per cent higher than the revised estimate of \$3,000 million in the previous month and 13.9 per cent above the level at the end of November 1965.

Manufacturers' inventories held at the end of November were 0.7 per cent higher than the level of the previous month. This increase of stocks from \$6,527 million in October to \$6,576 million in November occurred mostly in raw materials and finished products. The seasonally adjusted estimate of November inventories held, however, showed a rise of only 0.3 per cent with the gain largely centered in finished products.

Inventories owned by durable goods producers at the end of November dropped fractionally to the level of \$3,137 million from \$3,150 million in October but were 14.4 per cent higher than in November 1965. Transportation equipment industries and the primary metal industries recorded greater reductions in owned stocks than other major industry groups in November. At the preliminary November estimate of \$3,119 million, non-durable goods manufacturers' owned stocks were up 1.6 per cent from the month before. Food and beverage industries reported a substantial build-up in owned inventories in November, partly seasonal, from \$915 million to \$950 million. This increase was responsible for most of the gain in total manufacturers' owned stocks in November.

Both ratios of total inventories owned to shipments and finished products to shipments remained the same at 1.94 and 0.67 respectively as the preceding month, but indicated increases when compared with the ratios of 1.82 and 0.63 in November last year.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS

Shipments - (Tables 1 to 4) - represent an estimated projection, on a monthly basis, of the latest available Census of Manufactures values.

New Orders - (Tables 2 and 3) - This series is designed to indicate the rate at which new business is being received. It is defined as all New Orders Received during the period, at estimated selling values. Thus it covers total new orders, net of cancellations, regardless of whether the orders will be filled from stock or as a result of activity during the same month (and, therefore, will also be reported as shipments in the month received) or whether they will be added to existing backlogs.

Unfilled Orders - (Tables 2 and 3) - are defined as orders on books at the end of the period stated. That is, they cover orders received but not yet shipped (or treated as a sale), irrespective of work done on them or of stocks from which they can be filled.

Total Inventory Owned - (Tables 2 to 4) - represents the estimated book value of inventory owned by manufacturers in connection with the manufacturing operations of the establishment covered whether held at plant or elsewhere, at the end of the period stated. It is made up of: raw materials, goods in process, finished goods of own manufacture less the value of inventory held but not owned which cannot be assigned to specific components. Since the series relates to manufacturing inventory only, value of goods purchased for re-sale is not included.

Inventory Held but Not Owned - (Tables 2 and 3) - represents, as far as possible, the portion of manufacturers' total inventory holdings which are no longer owned by the reporting manufacturers because of payments made on long-term contracts as work on these progresses. This item is applicable only to the relatively few industries where long-term contracts are common although, because of the nature of the item, the value per industry is high.

Because of variations in accounting methods there are a few cases where it is not possible to obtain values for this type of inventory. The estimated value shown for this item must therefore be considered to some extent incomplete.

Total Inventory Held - (Tables 2 and 3) - represents the estimated total value of manufacturers' inventory holdings in connection with manufacturing operations, regardless of ownership; it differs from inventory owned by the inclusion of inventories held under progress payments arrangements.

Inventory Components - (Tables 2 and 3) - Raw Materials, Goods in Process, and Finished Products are reported and compiled as on the books of each manufacturer, i.e. there has been no attempt to define the components specifically for each industry.

The inventory components are always a breakdown of total inventory held, not of total inventory owned. In industries where these two items differ, due to the inclusion of inventory held but not owned (see above), it is not possible to obtain value of inventory owned by components since, where separate progress accounts are maintained, firms concerned can only state that, of total holdings, a certain amount is not longer owned by them. It is fairly obvious that the bulk of such payments apply to goods in process holdings but due to time lags in shipments and to prepayments some of the total value of inventory held but not owned would be applicable to finished products or raw materials.

Any comparisons of shipments/inventory ratios should be made using total inventory owned, not total inventory held, since the latter includes values which have already been written off to sales. If shipments/inventory ratios are desired using inventory components, rather than total inventory, a reasonable approximation to total inventory owned by components would be obtained by assuming that all inventory held but not owned had been included with goods in process.

Groupings - The Standard Industrial Classification groupings of industries used in Tables 3 and 4 are defined according to the Standard Industrial Classification Manual. A list of the industries included in the Standard Industrial Classification groups will be found on page 40 of the bulletin.

SOURCES

Monthly (or, in a few cases, quarterly) reports covering value of inventories and shipments are now submitted on a voluntary basis by 3,000 plants in 120 industries; in addition, 3,000 small plants in 100 of these industries report monthly shipments only. Of the first group, 1,025 plants in 83 industries also report new and unfilled orders. Two industries are included in the total shipments estimates by using data available from other Bureau series, and they are also included in the total inventory estimates.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.

ESTIMATED VALUES OF SHIPMENTS, INVENTORY OWNED AND UNFILLED ORDERS IN ALL MANUFACTURING INDUSTRIES

INTRODUCTION

The monthly data of manufacturers' shipments, inventories and orders published in this monthly bulletin represent estimates based on the monthly survey of manufacturers and projected on the latest available census of manufactures values. Annual revisions are necessary to reflect new census values as they become available and at the same time to move the benchmark forward for the current years. The changes in 1962 values reflect the revision in the census for that year; the 1963 and 1964 values now published are the census values and 1964 is the current benchmark. Thus the revisions in the 1965 and 1966 series are the projection of the 1964 values rather than the projection of the former 1962 census values.

The changes from the previously published estimates are the result of many factors. The first is revisions in the census list resulting from changes in the identity of establishments. From one census to another establishments will be redefined on the basis of the value added by different activities and therefore may be shifted from manufacturing to wholesaling or to construction or from these to manufacturing; the industry definition which is based on the type of commodities produced may require a re-definition of an establishment from one industry to another. When such changes in identity or definition occur the monthly survey must revise its current and therefore published values back to the new benchmark. Occasionally the concept and definition of a whole industry is changed as in the smelting and refining industry described below.

Secondly the census list is revised for births and deaths of manufacturing establishments. If births and deaths occur within companies reporting to the monthly survey the changes can be incorporated in the survey during the current period.

Thirdly the present method of compilation only picks up reported values which are received within the two months following each month's activity. Returns received after the revised (current) monthly estimates are not used in the estimates until the next annual revision. This accounts for a substantial amount of the change in any one series.

Fourthly changes in reporting practices which are identified as such only in the annual monthly - census comparison of establishment values will result in revisions. For example, if an establishment has been reporting gross shipments (i.e. value of sales including taxes and freight charges) and changes its books to report shipments net of taxes and freight without noting the difference, the monthly series will initially reflect the change as a decline in shipments.

Finally since the unit for estimation is the industry for each province there are many units where the number of establishments is so small that a change in the group results in a significant change in the new base. In these and in units where although the base is not small the number of firms reporting monthly is small, values in the reporting firms may not reflect the real trend in the unit. Where the coverage is inadequate the monthly trend is often wide of the mark and the census revision large at the industry and provincial level.

The largest change included in this annual revision is shipments and inventories in the smelting and refining industry which is part of the primary metal industry group. The method of valuing shipments in the smelting and refining industry was completely revised in the census of manufactures in 1964; this revision has now been carried back to 1961. Revision of the monthly values, however, is published in this report back only to 1962. The mining activity which is part of the total activity of many smelting and refining companies had been combined in the companies' annual reports to the census of manufactures. Under the new concept the mining portion of the integrated companies has been separated from the smelting and refining industry in order to produce more meaningful and consistent statistics within each activity: metal mining and smelting and refining. The smelting and refining activity for companies where mining and refining is integrated is now being handled as an activity only; the value of the metal is included in the mining industry. The smelting becomes, as it were, a custom operation. Only in those smelters which actually purchase raw materials does the value of the refined metal form part of the shipments out of the smelter. The value added by the smelter remains unchanged; the value of shipments has been reduced.

Another change in the revised estimates of shipments and inventories shows up as a decrease in values of the sash, door and other millwork plants and an increase in values of the sawmills. There is, however, little change in the total value of the wood industry group as a whole. The change in the above industries is the result of the re-classification of establishments primarily engaged in planing lumber from the former sash, door and planing mills industry to the sawmills industry effected in 1964.

As in the smelting and refining industries, this transfer of establishments from one industry to another has been revised back to 1961 by the census of manufactures.

The estimate of monthly shipments for the unpublished printing and publishing industry group is now based on reports from a monthly sample of establishments. These reports were first set up in 1964 and the coverage is not yet sufficient to enable the value to be published separately. However, the estimate from this part of the survey has been included from 1965 on in the total manufacturing estimate replacing the former estimate which was based entirely on census material. The revision has contributed considerably to the change in the total estimates for 1965 and 1966.

Other substantial changes in the revised monthly data are the result of one or more of the factors outlined above. Changes in shipments are relatively large in knitting mills, furniture and fixtures, metal fabricating, machinery and miscellaneous industry groups in 1964, 1965 and 1966. The changes in the estimates for the knitting mills, the furniture and fixtures industries and the miscellaneous industries are for the most part the result of inadequate coverage in the monthly samples in some of the provinces. In the metal fabricating and machinery industry groups, inconsistency in the firms' reporting methods between the base year and the estimated years in certain industries in some provinces is the main reason for the differences.

In manufacturers' unfilled orders, substantial changes which show up in some of the published industry groups are chiefly the result of low sample coverage; there was also an error in the base (1962) value used in one of the industries which was not identified until this revision. The revision in the unfilled orders estimate for the leather industry group is due mainly to a revision in the shoe industry; in the wood industry group the change occurred largely in the sawmills and planing mills, and in the non-metallic minerals industry group in the cement and concrete industries. The increase in the revised estimate of the machinery industry group is the result of a large upward revision in the 1964 base value in the agricultural implement and in the miscellaneous machinery and equipment industries. Relatively large changes also show up in some of the published individual industries such as the flour mills, the cotton yarn and cloth mills and the fabricated structural metal industry groups; these changes are caused mainly by an error in 1962 base values. The decrease in the revised estimate of the household radio and television receivers industries and the increase in the communication equipment industries in 1964, 1965 and 1966 reflects mainly the re-classification of establishments from the first industry to the second.

Changes in the level of inventories are large in the wood, the metal fabricating, the machinery and the miscellaneous industry groups. The changes are attributable largely to insufficient sample coverage in some individual industries. The change in the petroleum and coal products industries is chiefly due to the inconsistency in the reports of some firms.

The changes in the revised estimates of monthly shipments, inventories and orders for 1965 and 1966 though substantial in some industries, will, if the pattern of previous revisions is followed, bring the estimates closer to the final census universe. The month to month trends in the series remain relatively unchanged.

INDUSTRIAL GROUPINGS

The industries shown in the Standard Industrial Classification Groups are listed below.

A single asterisk (*) preceding the individual industry title indicates that the industry is shown separately in Table 4 - Statistics for Selected Individual Industries.

A double asterisk (**) preceding the individual industry title indicates that the industry is shown in Table 4 combined with one or more other industries. The industries grouped are listed in footnotes to the table.

The three digit number preceding the individual industry title indicates the S.I.C. group code.

The four digit number preceding the individual industry title indicates the S.I.C. sub group code.

The bracketed letters following the individual industry titles indicate the statistical series - shipments, inventories and orders in which the industry is included monthly: (s) means the industry is included in the shipments series; (i) in the inventory series; and (o) in the orders series. Industries for which monthly coverage is not indicated are included in the all-industry and group totals estimates.

CONCEPTS AND SOURCES

The monthly bulletin of manufacturers' shipments, inventories and orders publishes values of monthly shipments and inventories and unfilled orders on the books at the end of the month estimated on the basis of the latest census of manufactures by monthly returns from representative establishments in each industry. The December 1966 bulletin is the first issue in which the census base of 1964 is used. Values for 1962, 1963 and 1964 are derived directly from each annual census; values for 1965 and 1966 are projected from the 1964 census. The aggregate monthly shipments for each year which is based directly on a census should equal published census values. The year end inventory values published here are for December and thus will differ from the year end census values to the extent which establishments have reported to the census on a fiscal year ending at a date other than December 31. Unfilled orders on books are published for industries where orders are part of the accounting record.

The monthly survey covers approximately 6,500 establishments. The survey accepts combinations of establishments within companies on a monthly basis to accommodate monthly accounting records and also accepts estimates of inventories and orders values if actual records are not available. Many establishments in several industries take inventory only annually and keep no record of orders as orders. The number of firms reporting actual inventory values is approximately two-thirds of the total reporting shipments; approximately one third report unfilled orders.

The monthly sample of establishments in the survey is revised annually in accordance with the census base and the list is kept constant between revisions. The identity of an establishment is also retained between revisions. This is done because, simply stated, the estimates are calculated by multiplying the sum of monthly reported values for each industry in each province by the ratio of the establishments in the sample to the census total for the same unit. Separate ratios are calculated for shipments, inventories and unfilled orders. If a report is not received in time for the monthly compilation an estimated value is written in. Since each month is published first as a preliminary value monthly returns are accepted up to the time the machine compilation is begun and late returns for the month will be used one month later in the revised estimate. Returns received after beginning the compilation for the next month (i.e. January returns received after the February compilation is begun) are not used in the estimates until the following annual revision.

Thus changes in the monthly series will arise from changes in the identity of establishments between censuses, and from the substitution of reported for estimated values.

The inventory values published are shown both for total inventory owned and total inventory held by an establishment. The difference between these values is the amount of inventory financed by progress payments as the work proceeds on goods being produced. Since some goods manufactured are held as in-progress inventory for a considerable time the book value of manufacturers' inventory may build up and, to the extent that this has been covered by the payment received, is higher than the manufacturers' investment in inventory. Both the amount of the manufacturers' investment in inventories and the amount of inventory held by manufacturers is of economic interest. It is also interesting to distinguish between inventory held by the degree of fabrication which has taken place. Consequently firms are asked to report their stocks by level of fabrication: raw materials and components; work in progress and finished products.

Unfilled orders cover orders received but not yet shipped, or treated as a sale, irrespective of work done on them or stocks from which they can be filled. Establishments in many industries do not maintain order books but fill orders as they are received from stocks. Most establishments which do maintain order books strike a value of unfilled orders on their books at the end of each accounting period. New orders received, although an estimate of considerable interest to economists as an indication of the rate at which new business is being received, is not often available from accounting records. Consequently the estimate for new orders published here is derived by industry, by province from the relationship between unfilled orders and shipments.

The definitions, classifications and groupings are taken from the census of manufactures.

FOOTNOTES TO TABLES

TABLE 1. - (1) Prince Edward Island, Yukon and Northwest Territories are not published separately. They are included in the total for Canada.

TABLE 3. - (1) The value of Unfilled Orders and, therefore, of New Orders for industries in major groups - 1, 2, 6, 8, 9, 10, 17, 18 and 19 is small and sample coverage is not adequate to provide separate estimates for them.

(2) The value of inventory held but not owned in this group is very small, and sample coverage is not adequate to provide separate data. Estimates for this type of inventory are included with Total Inventory Held; for all practical purposes this can be considered the equivalent of Inventory Owned.

TABLE 5. - (1) Ratios for this group were calculated using values of Total Inventory Held instead of values of Total Inventory Owned. See footnote (2), table 3.
